Lighting Solutions

Global Lighting Solutions Generations of experience

The Glamox Group is the leading supplier of lighting solutions to the marine and offshore markets. We are a local partner – with global network. Through our five brands; aqua signal, Glamox, Høvik Lys, Luxo and Norselight we fulfill all your requirements, from floodlights and searchlights, through explosion proof luminaires and interior systems to navigation lighting. Our team of engineers has been carefully chosen to give the right blend of experience and creativity. The company develops high quality products and energy efficient systems for extreme applications. All based on innovative technology. Our solutions demand more than today's expertise – it demands generations of experience.

Technical Information 112

Premium product brands:

aqua signal specializes in the field of navigation lanterns, floodlights and technical luminaires deployed in widely varying environments. aqua signal supplies products for use in segments such as commercial shipping, cruise ships and ferries, navy vessels and recreational vessels, in other words, anything that operates on water.

GLAMOX Glamox has over decades been concentrating on the challenges of lighting technology for use in industrial environments. Glamox develops a wide range of products and complete lighting technology systems for use on seagoing ships and on the increasingly important offshore installations of the oil and gas industry. They specialises on explosion-proof luminaires made for hazardous areas.

HØVIK LYS Høvik Lys is a specialist in design and decor for marine hotels. The range of products from Høvik lys consists primarily of decorative products. Høvik lys supplies luminaires to the world's largest and most exclusive cruise ships.

LUXO Luxo is committed to supply innovative ergonomic lighting solutions to meet requirements for the right light. Focusing on the individual and the importance of how lighting influence our well being, they aim to be a partner in creating comfortable, flexible and stimulating environments.

NORSE light Norselight is regarded as the specialist in searchlights and floodlights that work reliably even under the most extreme conditions from the Arctic Sea and winter to the Tropics.

Global Marine & Offshore

Total lighting solutions

Your partner in marine lighting

The Glamox group aims to be the first choice when quality, competence and reliability counts. The company supplies a complete range of lighting equipment for marine and offshore vessels.

The group is a leader among the world's suppliers of light fixtures and lighting solutions to the global marine and offshore markets. The company's business area is represented globally through its' own sales companies, agents and distributors. We have sales units in Norway, Germany, Finland, Dubai, UK, Singapore, Korea, China, USA and Canada.

The group has a market model that enables it to serve the important sales and distribution channels aimed at shipyards, oil companies, FPSO and drilling companies, engineering consultants and installation contractors.

Our values are:

- Customers
- Cooperation
- Commitment
- Quality
- Ethics

The group's involvement in several prestigious projects is proof of its ability to plan, execute and deliver on time.

"With a supplier such as Glamox, we are in dialogue from design to finished product.", Johan Kolstø, HSE Advisor in StatoilHydro

"Wherever there has been a need for special technical solutions onboard, they have quickly adapted their light fittings to meet our particular requirements." Pekka Jussila, Electrical systems purchaser, STX Finland Cruise shipyard

Maritime Lighting for the future

Wide range of products

Our Navigation lights are made according to world-wide standards. We have a full range of navigation- and signalling lights fulfilling all requirements of IMO Anti Collision Regulations and local rules.

A unique laboratory

Our laboratory is one of the best equipped environmental test centres for lighting equipment in Europe. It is recognized by Federal Maritime and Hydrographic Agency (constant light measuring and control).

Long experience

Our experienced staff can give you advice on the navigation- and signalling lights required by all types of vessels – world-wide. We offer the best materials suitable for marine equipment.

Searchlights for more than three generations

We guarantee that our products meet the high quality standards that are required under tough and demanding weather conditions. Our products are designed and manufactured for extreme environmental conditions. Lighting equipment produced by our company for more than 30 years ago is still in use. Extensive Product Range - from direct operated to wireless remote controlled, from 12V to 440V, from 35W to 5000W, from Halogen to Xenon.
-You need it, we got it.

Maritime Lighting for the future

Tips and hints

Tailor-made solutions for Navigation lights and control panels

By giving us your specific light arrangement plan, we can assist you by proposing the required types and numbers of navigation- and signalling lights. We can also propose a suitable navigation- and signalling light control panel. Please tell us about your challenges and we will provide you with solutions.

Searchlight with innovative systems

Did you know that Xenon searchlights can be turned on and off at your request, no need for heat up or cooling down period. A Xenon lamp has a 4 times longer lifetime than a Halogen lamp. With our R50 control system you can control up to 9 searchlights from only one panel. The remote control is either through a fixed main panel, a wireless control panel or computer based (PC). With the computer based control system you can preset or program as many sweep programs as needed.

Navigation Lights

LED and incandescent navigation - and signalling lights fulfilling all requirements of IMO Anti Collision Regulations and local rules

HOISTABLE VERSION
(allround lights)

Series 55

Steering light blue

- Indication of ships movement

Application

Early indication of ship’s movement when operating in narrow waterways or passing canals etc

Housing

Glass fibre reinforced polycarbonate and stainless steel. Other components of non-corrosive materials. Nonmagnetic, sea-water resistant

Housing colour

Mat black and steel coloured

Optics

Wheel cross in two sizes suiting the ship’s length included

Electric

Wiring with 1.5 m special cable
3 x 1.5 mm²

Lamp

(included) Easy to change bulb with lamp base B 22

Mounting

Base flange attachment, 4 screws
Ø8 mm (not included)

Cable insert

PG 13.5 with buckling protection

More variants are available on request. Complete assortment on www.glamox.com/gmo

aqua signal Special

Flashing light blue

Application

Red Cross-, Sea Rescue Service-, Customs and Border-Patrol crafts and for crafts with comparable tasks

Housing

Special plastic

Housing colour

Black, globe blue

Optics

The striking attraction of the light signals is achieved through the arrangement of the halogen lamp and of the three lenses, which emit a strongly focused light in three directions at the same time. The strong focuses of light are strictly separated from each other and result in the wanted flash light

Electric

Motor and control print-card 12V or 24V

Lamp

(included) Halogen lamp 12V / 55W or 24V / 70W

Mounting

With 3 screws (not included)

Cable insert

PG11, from below

Approvals

International according to IMO COLREG, ICI, ICR, Sea Waterways Rules. In Germany through BSH, under BSH 165/01/91. For the European Inland Waterways under "Anchor" D 16501

Min. visibilities

6 n.m., 120 flashes per minute

More variants are available on request. Complete assortment on www.glamox.com/gmo

aqua signal Bremen

Watertight portable Searchlight "BREMEN"

Application

On deck, in engine rooms, as navigational aid in narrow channels, under water

Housing

Mat black elastic rubber, nonmagnetic, seawater resistant, submersible

Electric

Built-in watertight ON/OFF switch with MORSE facility, 3 m pigtail cable (drawn) 2 x 0.75 m², for connection we recommend the aqua signal plug connectors

Lamp

(included) Built-in sealed beam

Approvals

Approved as portable searchlights for lifeboats as per SOLAS by UK DOT and Dutch NSI

More variants are available on request. Complete assortment on www.glamox.com/gmo

aqua signal Control

Control Touch Panel (LED)

- Suitable to switch and monitor aqua signal LED navigation- and signalling lights series 65 and lights with traditional incandescent lamps
- aqua signal new generation navigation and signalling lights controller

Control Unit

Switches with control function:

Frontplate consisting of aluminium plate with printed foil, standard colour black - other colours upon request, with up to 4 freely programmable settings, for example "Sailing" or "At Anchor". With coloured diodes in the ship / mast symbol which are illuminated when the respective light is switched on.

With visual and acoustic alarms.

With alarm acknowledgment and alarm test, indication LEDs are dimmable

Switch and monitoring unit:

On mounting plate which has to be accommodated in a steel box. It contains the relay cards, power supply unit, melting fuses/or circuit breakers and terminal rails. In case of control unit failure the lights can be switched by hand in the switch and monitoring unit

Measurements:

For 16 + 16 + 16 circuits:

Width 750 mm
Height 900 mm
Depth 122 mm

For 16 + 16 circuits:

Width 750 mm
Height 600 mm
Depth 122 mm

For 8 + 8 circuits:

Width 485 mm
Height 600 mm
Depth 122 mm

Approvals

Germanischer Lloyd, Bureau Veritas, Russian Maritime Register of Shipping - others pending

Electric

24 VDC, 230 VAC/115 VAC \pm 10% - 50/60 Hz

Special features

With Bus interfaces connection to external systems for uni- or bidirectional data transfer (RS485, RS232, USB or Ethernet)

Frontplate:

- 3 standard sizes
- special designed frontplate also available

More variants are available on request. Complete assortment on www.glamox.com/gmo

Drawing no. 3425506
For max. 48 circuits (16 main + 16 standby lanterns + 16 extra main lanterns)

aqua signal Control Control Panel

- Unit to switch, fuse and monitor navigation- and signalling lights. Suitable for incandescent lights and aqua signal LED lights series 65

Description

The panel consists of a front plate with switches, indicators and a casing fitting to the front plate. Inside the casing there is the electronic detector and the internal voltage processor. The light circuits are fed via serial terminals located inside the casing. The terminals are numbered. The connecting scheme can be seen from the individually supplied terminal plan

Detector unit

The supervision of the lights is being effected by indirect measurement of the lamp current. There is no electrical connection between the lamp circuit and the detector unit. In case of failure of the detector the navigation and signalling lights remain functioning. There is no voltage drop in the lamp circuit by the electronic detector. With the light switched on, proper functioning of the circuit is monitored by two LEDs. The brightness of the LEDs can be dimmed, however, reduction to zero is prevented. If the lamp circuit is defective (e.g. bulb blown, cable cut, short circuit) the LED will start flashing. Simultaneously an acoustic alarm signal has to be acknowledged (see alarm reset). Printing and colour of front-plate according to your requirements

Application

Ships where navigation lights are to be monitored

Approvals

Type approvals available from all important classification societies. To allow selecting admissible type please advise class in your enquiry

Housing

Black powder coated

Mounting

After having secured the front plate the mechanical installation is completed (4 screws)

Front plate

Natural or mat black anodized. All RAL colours available at additional charges

Electric

Panel voltages: 230 V \pm 10 % 50 / 60 Hz \pm 5 %; 110 V \pm 10 % 50 / 60 Hz \pm 5 %; 24 V DC \pm 20% (separate or common supply)

Mounting depth

260 mm + 100 mm to allow changing of print card

Radio interference suppression

IEC 60945

Electrical connection

The terminal plan supplied with each unit indicates the sequence in which the lights to be monitored have to be connected. Terminals for voltage supply to the light circuits and the unit itself are also indicated. One instruction manual with connecting and wiring scheme is included

Voltage supply to the panel

The internal voltage processor supplies the control electronic system with DC. For supply to the internal voltage processor see panel voltages

Important

For units with input voltage monitoring, systems voltage supply to the unit has to be cut off prior to removing print cards because cards of monitoring system are independent on master switch position

Alarm reset

When pressing the push button "reset", the audible alarm is acknowledged. In case of another circuit failing the audible alarm is re-activated. The visible alarm keeps on flashing until the fault is repaired or the defective circuit is switched off

Standard

*Input voltage monitoring

*3 Potential-free contacts

For external alarm

- Failure of individual lantern

- Failure of lantern voltage

- Failure of panel voltage

*Alarm Test"

Available variants

*Automatic switch-over between 2 identical lantern voltages

*Interface for voyage data recorder

*Different voltages between main and standby lights (24 V and 110 V or 24 V and 230 V) limited to 8 circuits

aqua signal Control	3425402	Same as 3425401, however, main and standby lanterns are monitored by the same system (individual switch-over from main to standby lights)	Frontplate: 220 mm x 330 mm H x VV Aperture: 205 mm x 300 mm Depth: 260 mm + 100 mm for cable delta	7.1	3425402
aqua signal Control	3435405	For max. 14 circuits (main lanterns) fused double pole by automatic circuit breakers acting thermically and magnetically	Frontplate: 220 mm x 220 mm Aperture: 205 mm x 190 mm H x W Depth: 260 mm + 100 mm for cable delta	5.5	3435405
aqua signal Control	3435406	Same as 3435405, however, main and standby lights are monitored by the same system (individual switch-over from main to standby lights)	Frontplate: 220 mm x 330 mm H x VV Aperture: 205 mm x 300 mm Depth: 260 mm + 100 mm for cable delta	7.1	3435406
aqua signal Control	3435407	Same as 3435406 however, for max. 16 circuits	Frontplate: 246 mm x 330 mm H x VV Aperture: 231 mm x 300 mm Depth: 260 mm + 100 mm for cable delta	8.0	3435407

aqua signal

Panel Safe Return to Port

- Unit to switch, fuse and monitor navigation- and signalling lights. Suitable for incandescent lights and aqua signal LED lights series 65
- Special version for Safe Return to Port (SRtP)

Description

Special requirements "SAFE RETURN TO PORT (short SRtP)" comply to IMO MSC.1/Circ. 1214

The requirement describes performance standards for the system and services to remain operation on passenger ships for safe return to port and orderly evacuation and abandonment after a casualty.

These performance standards provide additional guidance for the uniform implementation of SOLAS regulation II-1/8-1 and II-2/21.3, basic services be provided to all persons on board and that certain systems remain operation for safe return to port in case of fire or flooding.

Also navigation lights/navigation control panels shall meet these requirements!

One possible implementation is spatially separation of main- and standby control systems.

The split cabinets are connected via 2-wire BUS system (RS485). If there are multiple BUS lines to be provided, shall be also spatially separated from each other.

More variants are available on request. Complete assortment on www.glamox.com/gmo

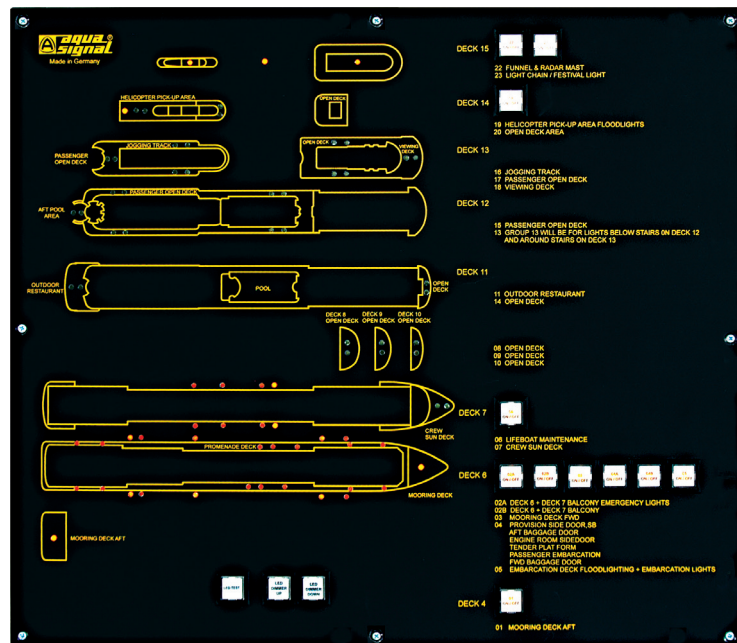

Product	Part-No.
aqua signal Control SRtP	3464XXX

Example System overview

Switch-Panels for switching of non-safety related lighting, e.g. deck-lighting, interior lighting, searchlights etc., foldable masts with limited switch control

- Max. 4 A per circuit
- Higher Amps. via relays possible
- Switch status is shown in illuminated switches and in mimic (LEDs)
- Direct switching to the consumers or in case of connection to a dimming system only indication via LEDs
- Diodes are dimmable
- With LED-Test

Housing

Powder-coated, colour according to customer's request

Frontplate

Anodized, black or natural, other colours possible (RAL Chart). With Ship mimic, Deck mimic or depiction of the respective location where the consumer is positioned. Measurements as per customer's requirements

Custom-made panels according to your requirements:
Size, design and colour of the frontplate. For a quotation we request your technical requirements.

Seawater resistant aluminium searchlights with polyester coating.
Direct operated, bridge operated and remote operated.
Lamps in halogen, xenon and metal halide

SH 200 D/BS/BH

Searchlight Halogen for smaller vessels

Direct and Bridge operated

- Designed to meet applicable marine requirements, IP67
- Stainless steel front ring with snap coupling for easy replacement of lamp
- High quality seawater resistant aluminium housing finished in white polyester coating

Specifications

The Halogen searchlights SH 200 D/BS/BH are intended for smaller tonnage, e.g. fishing boats, tugs and work boats. Built with corrosion-resistant components, and designed for extreme marine environments which require minimum maintenance. Light weight and simple to mount, these searchlights provide reliable lighting in all kinds of temperatures. Drum of seawater resistant aluminium finished in white polyester coating and bracket of stainless steel. Black drum inside

Light source

Tungsten halogen lamp with G6.35 lamp holder. Variants for 100W 12V or 24V, and for 250W 24V
Lamp included

Mounting

D (Direct Operated), BS (Bridge Short) and BH (Bridge High)

Optics

Adjustable beam, hardened front glass and durable silver-plated glass reflector specially designed for halogen bulbs

Connection

Flexible cable connection

D	BS	BH
Direct operated	Bridge Short	Bridge High

More variants are available on request. Complete assortment on www.glamox.com/gmo

Specifications

Halogen searchlights SH 260, SH 310, SH 470 and SH 480 are suitable for all kinds of ships. The control system is based on TCP/IP technology.

9 different units of Xenon or Halogen searchlights can be connected to the same network through Ethernet cat 5 cables. It is stepless adjustable 360° horizontal and 55° tilting movements. There are several options of control panels both hard wired and wireless, which are fitted to standard solution. Built with corrosion resistant components, and designed for extreme marine environments which require minimum maintenance. High quality seawater resistant aluminium housing finished in white polyester coating.

HR R20

Searchlight Halogen Remote Controlled for fast-running vessels

- Designed to meet applicable marine requirements
- Applicable to sub-zero temperatures of -40°C
- Low weight and compact design

Specifications

HR 250 R20 is very well suited for high speed vessels, tug boats, pilot vessels and luxury yachts, due to the clean compact design and its low weight. Built with corrosion resistant components, and designed for extreme marine environments which require minimum maintenance. Besides low weight and simple mounting, these searchlights provide reliable lighting in all kinds of temperatures

Light source

250W/24V halogen lamp GX6.35 for 24, 115 and 230V.

650W/230V halogen lamp GX9.5 for 230V

Lamp included

Options

Slave panel

Pedestal for high mounting

Radio control

Optics

Durable silver-plated glass reflector specially designed for halogen bulbs. Remote controlled light distribution (wide or narrow beam)

Spare Parts/ Accessories

XENON BL

Bowligh

- The “micro xenon” bowlights are especially designed by request from fast ferry operators
- Available with dual and triple reflectors

Application

The lights are mounted in the bow of the vessel and work as «head lights», useful when manouvering in narrow waters and for detection of floating obstacles, ice, navigation buoys, etc. The dual light and reflector type can be individual operated, allowing combinations of wide and narrow beams

Design

Designed to meet applicable marine requirements

Housing

House, frontring, mounting bracket and junction box in seawater resistant aluminium. Protection class IP67

Finish

Powder coated white RAL 9016 and enamelled up to 70 - 80 µm thickness

Pane (Diffuser)

Safety glass

Reflector (Optic)

Narrow beam (NB) or wide beam (WB) light distribution

Electric

Flexible wiring, silicone insulated, heat resistant up to 180°C

Lamp base

P32d-2

Light source

Micro Xenon (24V), lamps included

Mounting

Adjustable bracket with three mounting holes, Ø9 mm

Cable entry

Cable gland M20

Termination

Screw Terminal Strips between the range of 0.5 mm² to 4 mm²

Remarks, Options

Antidazzle shade
Swivel arm
Pendent mounting bracket

SHRI 1000 D/DH

Searchlight Metal Halide

Direct Operated

- Designed to meet applicable marine requirements
- Heat resistant silicone rubber front ring gasket
- Thermostatic controlled heating in drum for optimal working conditions

Specifications

Metal halide searchlight SHRI 1000 D/DH is suitable for all kinds of ships, especially vessels demanding high light output or operating in harsh winter/ice conditions such as tugs, icebreakers, offshore supply vessels or ice-classed vessels. The performance of the Metal Halide light is similar to Xenon, though with a wider and shorter beam range. Built with corrosion resistant components, and designed for extreme marine environments which require minimum maintenance. High quality seawater resistant aluminium housing finished in white polyester coating. Stainless steel forks and fittings. The searchlight provides reliable lighting in all kinds of temperatures, has low weight and simple mounting

Options

Pedestal for high mounting
Morse shutter
Spread filter
Canvas cover

Power supply in separate box included see page 96-97

Light source

Metal Halide lamp 1000W included

Mounting

D (Direct operated) or DH (Direct operated High) with pedestal for high mounting. Ballast unit in separate box included

Optics

Hardened front glass and durable silver-plated glass reflector. Remote controlled light distribution (wide or narrow beam).

More variants are available on request. Complete assortment on www.glamox.com/gmo

SHRI R50 BUS

Searchlight Metal Halide Remote Controlled BUS

- Designed to meet applicable marine requirements
- Applicable to sub-zero temperatures of -40°C
- Stepless adjustable 360° horizontal and 55° vertical movement

Specifications

Metal halide searchlight SHRI 1000 R10 is suitable for all kinds of ships, especially vessels demanding high light output or operating in harsh winter/ice conditions such as tugs, icebreakers, offshore supply vessels or ice-classed vessels. The performance of the Metal Halide light is similar to Xenon, though with a wider and shorter beam range. The control system is based on TCP/IP technology. 9 different units of Metal halide, Xenon or Halogen searchlights can be connected to the same network through Ethernet cat 5 cables. It is stepless adjustable 360° horizontal and 55° tilting movements. There are several options of control panels both hard wired and wireless, which are fitted to standard solution. Built with corrosion resistant components, and designed for extreme marine environments which require minimum maintenance. High quality seawater resistant aluminium housing finished in white polyester coating. Stainless steel forks and fittings. The searchlight provide reliable lighting in all kinds of temperatures, has low weight and simple mounting

Light source

Metal Halide lamp 1000W included

Mounting

R50 (Remote controlled) or R50H (Remote controlled high) on pedestal. Control panel, switch, ballast unit (part# 1009157) and spare lamp to be ordered separately.

SH 510 Suez

Suez Canal Searchlight

- Designed to meet applicable marine requirements
- Certified in accordance with Suez Canal Authorities
- Water and gas-tight drum with ventilation and safety valve

Specifications

SH 510 Suez Canal Searchlights are designed for installations on all sizes of vessels using the canal and comply fully with the regulations of the Suez Canal Authorities. The searchlight can be easily moved from the storage and mounted on deck by a single person, due to the low weight and convenient lifting handles. All the components are chosen to withstand corrosion and require minimum of maintenance. The SH 510 Suez Canal Searchlights are equipped with dual projector lamps with external switchover arrangement in case of burn out

Light source

Vessels above 30000 DWT shall be equipped with a searchlight of 3000W, and vessels less than 30000 DWT with 2000W Lamps included

Optics

SH 510 produces two horizontal lightbeams of 5° with a dark central sector of 10°. SH 510 is delivered with hardened temperature resistant front glass and controllable split reflector, made of durable silver-plated glass

Options

Storage bow
Eex de IIC T6 plug, socket and switch

MX D - BS - BH

Searchlight Xenon for smaller vessels

Direct and Bridge Operated

- Built for marine environment, IP67
- Front ring with snap coupling simplifying
- Water and gas-tight drum with ventilation and safety valve

Specifications

The «micro xenon» searchlights MX 35 D, MX 35 BS and MX 35 BH are intended for smaller tonnage, e.g. fishing boats, tugs and work boats, or as a «backup» searchlight powered by the ship battery system.

The unique 35W micro xenon light source ensure extreme light output at a very low effect. All the components are chosen to withstand corrosion. The searchlights are designed for use in extreme marine environments and require a minimum of maintenance. Benefitting from low weight and simple mounting, these searchlights are designed to operate across a wide temperature range

Light source

Lamp DL-35W white d2s
hella, lamp included

Mounting

D (Direct operated), BS (Bridge Short) and BH (Bridge High)

Options

Adjustable beam, hardened front glass and durable silver-plated glass reflector specially designed for xenon bulbs

Features

- Hardened front glass
- High quality silver-plated glass mirror
- Front ring and snap coupling of stainless steel
- Narrow or wide beam
- 1lux at 726 m (Narrow beam) or 335 m (Wide beam)
- Low power consumption, only 35Watt

Searchlight Xenon Direct Operated

- Designed to meet applicable marine requirements
- Heat-resistant, silicone rubber front ring gasket
- Seawater-resistant aluminium housing finished with white polyester coating

Specifications

Xenon searchlights XS 500, XS 1000, XS 1600, XS 2000 and XS 3000 are suitable for all kinds of ships. Built with corrosion resistant components, and designed for extreme marine environments which require minimum maintenance. Stainless steel forks, bolts, screws and nuts. Low weight and simple to mount, these searchlights provide reliable lighting in all kinds of temperatures. Power supply unit and main control panel is included

Light source

500, 1000, 1600, 2000 or 3000W Xenon lamp included. Through a unique colour distribution, the Xenon lamp rapidly detects ice and illuminates surface objects. Its beam range is about 4 times that of a Halogen light

Mounting

D (Direct Operated) or DH (Direct Operated High) with pedestal for high mounting

Optics

Durable silver plated glass reflector and hardened front glass. NIRH version with Nickle Rhodium reflector for maximum light output. Remote controlled light distribution (wide or narrow beam)

Options

Spread filter
Morse shutter
Pedestal for high mounting

Power supplies, see page Power Supply

- Designed to meet applicable marine requirements. Heat-resistant, silicone rubber front ring gasket
- Seawater-resistant aluminium housing finished with white polyester coating
- Thermostatic controlled heating in drum for optimal working conditions

Specifications

Xenon searchlights XS 500, XS 1000, XS 1600, XS 2000 and XS 3000 are suitable for all kinds of ships. All the components are chosen to withstand corrosion. The searchlights are designed for use in extreme marine environments and require a minimum of maintenance. Seawater-resistant aluminium housing finished with white polyester coating. Stainless steel forks and fittings. Benefitting from low weight and simple mounting, these searchlights are designed to operate across a wide range of temperatures. Power supply unit and main control panel included

Light source

500, 1000, 1600, 2000 or 3000W Xenon lamp included. The colour distribution of the Xenon lamp makes it especially applicable for detection of ice and illuminates surface objects, as well as having a range 4 times higher than that of a Halogen light

Mounting

To deck/base

Optics

Durable silver plated glass reflector. NIRH version with Nickle Rhodium reflector for maximum light output. Remote controlled light distribution (stepless wide or narrow beam).

Options

Slave panel
Pedestal for high mounting
Wireless control
Spread filter

Power supplies, see page Power Supply

- Meets applicable marine requirements
- Is designed for Arctic environments with temperatures down to -40°C
- Thermostatic controlled heating in motor and drum for optimal working conditions

Specifications

Xenon searchlights XS 500, XS 1000, XS 1600, XS 2000 and XS 3000 are suitable for all kinds of ships. The control system is based on TCP/IP technology where 9 different units of Xenon or Halogen searchlights can be connected to the same network through Ethernet cat 5 cables. There are several options of control panels both hard wired and wireless, which are fitted to standard solution.

All the components are chosen to withstand corrosion. The searchlights are designed for use in extreme marine environments and require a minimum of maintenance. Seawater-resistant aluminium housing finished with white polyester coating. Stainless steel forks and fittings. Benefiting from low weight and simple mounting, these searchlights are designed to operate across a wide range of temperatures

Light source

XR R20

Searchlight Xenon Remote Controlled for fast-running vessel

- Designed to meet applicable marine requirements
- Low weight and compact design
- Applicable to sub-zero temperatures of -50°C

Specifications

XR 150 and XS 500 are very well suited for high speed vessels, tug boats, pilot vessels and luxury yachts, due to the clean compact design and low weight. All the components are chosen to withstand corrosion. The searchlights are designed for use in extreme marine environments and require a minimum of maintenance. Seawater-resistant aluminium housing finished with white polyester coating. Benefitting from low weight and simple mounting, these searchlights are designed to operate across a wide range of temperatures. Integrated power supply on XR 150 R20. Control panel and power supply unit included

Light source

150 or 500W Xenon lamp included. The colour distribution of the Xenon lamp makes it especially applicable for detection of ice, as well as having a range 4 times higher than that of a Halogen light

Mounting

To deck/base. Integrated power supply for XR 150

Optics

Durable silver plated glass reflector.
Remote controlled light distribution (wide or narrow beam)

Options

Pedestal for high mounting
Slave panel
Radio control

Power supplies, see page Power Supply

Spare Parts/ Accessories

DM 60

Daylight signalling light

- Sliding shutter mechanism
- Integrated sighting tube with aiming device and rubber eyepiece
- Signalling range 14 km (8 miles)

Application

In accordance with SOLAS and the relevant national authorities.

All passenger vessels exceeding 12m and vessels of at least 150 tons must carry a type approved portable daylight signalling lamp. Transmission rate max 12 words/min

Housing

Housing in seawater resistant aluminium. IP56

Electric

Battery capacity 6 hours signalling, and 1,5 hours continuous use

Finish

White polyester coating

Pane

Safety glass

Reflector

Highly polished aluminium reflector with front glass of toughened soda lime quality

Light source

P30D/60W (12/24V)

Mounting

DM 60 is as standard supplied with:
Storage box, red and green filters,
60W bulbs, battery and charger

Termination

5m self curling extendable cable

Options

3 pin socket
3 pin socket in WT box
Portable transformer

More variants are available on request. Complete assortment on www.glamox.com/gmo

Control Panel

Control Panel for R10/R20/RS2 Halogen and Xenon Searchlights

- The control panels are intended for flush mounting
- Glare free panel front with engraved text
- Simple operation with joy-stick

Specifications

R10/R20 control panel and slave panel for remote control of searchlights with R10 or R20 motor unit

R10/R20 is a modern, lightweight and compact remote control unit which require minimum maintenance

RS2 control panel and slave panel for remote control of searchlights with RS2 motor unit

RS2 is a solid and powerful remote control system intended for large searchlights, and for searchlights which are located more than 100 meters away from the control panel.

- Stepless adjustment of horizontal/vertical speed on R10/R20
- Adjustment of horizontal movement on RS2

Options

Mounting in IP56 box

Spare Parts/ Accessories

Equipment for R50 Searchlight Control System

- Connect up to nine searchlights on the same control panel
- The searchlight can be operated without the light being turned on
- Standard panel for XS, and SH searchlights

Specifications

Recessed control panel and slave panel for remote control of searchlights with R10 motor unit. The control system is based on TCP/IP technology were 1 to 9 different Operator Panel can control separately up to 9 searchlights of Xenon or Halogen. The system is connected to the same network through Ethernet cat 5 cables with RS485 connectors. Panel uses RJ45 connections routed to LAN switch to connect the panel(s) to a network of searchlights. There are several options of control panels both hard wired and wireless, which are fitted into a standard solution. LED's to indicate; Lamp ON/OFF, positioning, speed control and Searchlight number in use indicator

Mounting

Flush mounting to the Wheel House consol using power 24 VDC. Easy to add on slave panel. (plug and play)

Operation

The Panel is a modern, lightweight and compact remote control unit which require minimum/easy maintenance. Functions:

Joystick control
Searchlight selection
Step less adjustment of horizontal vertical speed
Focus adjustment
Lamp ON/OFF
Backlight dimmer
Position indicator

Slave Panel with Joystick

Easy Plug & Play

Technical information

Light technical definitions

Concept	Symbol	Unit	Formula	Explanation
Luminous flux	Φ	Lumen (lm)		Lumen output is the total amount of light from a light source defined toward the sensitivity curve of the human eye.
Luminous intensity	I	Candela (cd)	$I = \frac{\Phi}{\Omega}$	Intensity of the light output in a specific direction. Defined as luminous flux per solid angle.
Illuminance	E	Lux (lx)	$E = \frac{\Phi}{A}$	The luminous flux that hits an area divided by the size of that area.
Luminance	L	(cd/ m ²)	$L = \frac{I}{A}$ $(L = \frac{I}{A} \cos \phi)$	The luminous intensity that reflects from a surface divided by the size of the perceived surface.
Luminance distribution				The luminance distribution in the field of view controls the adaptation level of the eyes, which affects task visibility.
Colour temperature		Kelvin K	CIE 17.4	The colour temperature is used to identify the respective light colour. We often divide in to three categories. < 3300K = warm white; > 3300K<5000K = Neutral white and >5000K = Daylight.
Colour rendering	Ra	Ra-index	CIE 17.4	The colour-rendering index Ra derived from a set of six test colours and is used to evaluate the colour rendering characteristics of the lamp. The index is graded from 1 - 100 where 100 are lamps that contain radiation from the whole visible spectre. DIN 5035 states six of these levels: 1A=90-100; 1B=80-90; 2A=70-80; 2B=60-70; 3=40-60 and 4=20-40. 1B is recommended for indoor working environment.
Luminous efficacy	H	lm/W	$H = \frac{\Phi}{P}$	Luminous flux from the lamps divided by the power loss of the lamps.
System efficacy	Hs	lm/W	$H = \frac{\Phi}{P_s}$	Luminous flux from the lamps divided by the power loss of the system (lamps, ballast and others).
Uniformity / Evenness			$\frac{E_{min}}{E_{mid}} \quad \frac{L_{min}}{L_{mid}}$	Relations between the lowest and the average value. Passes for both Illuminance and luminance.
Glare			CIE-31	A condition that affects the visibility to see details or gives distaste. Normally divided in to: unpleasant glare (UGR/NB) and Sight restrictive glare (TI/°)
Cut-off angle				The angle between a horizontal axes through the luminaire and the sightline when the light source becomes visible.
Light output ratio	η	%		Ratio of the total flux of the luminaire, measured under specific conditions, to the sum of the individual luminous fluxes of the lamps operating outside the luminaire.
Reflection coefficient	p	%	$\frac{\Phi_{out}}{\Phi_{in}}$	Ratio of the total flux reflected from an area to the incoming flux on the same area.
Contrast / Contrast sensitivity	C Cs		$C = \frac{I_b + I_o}{I_b}$	Objects can be distinguished primarily on the basis on the difference in luminance and colour between the objects and its immediate surroundings. The contrast sensitivity expresses the least possible luminance contrast the eye can discern. Cs is influenced among others by glare from the visual field.
Average lifetime		Hours (h)		Average lifetime is defined as when 50% of a larger amount of the product is still running.
Service lifetime		Hours (h)		Service lifetime is defined as when 80% of the calculated lux level is reached.
Economical lifetime		Hours (h)		Economical lifetime is defined as when 70% of a larger amount of the product is still running.

Technical information

Protection degrees

The following protection degrees define the protection of electrical appliances against accidental contact, foreign matters and water as laid down in IEC Publication 60529

Table 1

First ident. No.	Protection level (contact and foreign matters)
0	No special protection
1	Protection against penetration of solid foreign matters, diameter > 50 mm, no protection against intentional contact e.g. by hand, body contact, however, is prevented.
2	Protection against penetration of solid foreign matters with outside diameter of more than 12 mm, finger contact or similar is prevented.
3	Protection against penetration of solid foreign matters with outside diameter of more than 2.5 mm. Prevents insertion of tools, wires or similar matters larger than 2.5 mm.
4	Protection against penetration of solid foreign matters with outside diameter of more than 1 mm. Prevents insertion of tools, wires or similar matters larger than 1 mm.
5	Protection against damaging dust accumulation. The penetration of dust is not totally prevented but is not permitted to penetrate to such a degree that the effectiveness of the equipment is affected. Complete contact protection.
6	Protection against penetration of dust. Complete contact protection.

Table 2

Second ident. No.	Protection level (water)
0	No special protection
1	Protection against vertical falling drip water, shall have no harmful effect.
2	Protection against vertical falling drip water; when fixture is shifted up to 15° from its normal operating condition there shall be no harmful effect (flanking drip water).
3	Protection against spray water falling at any angle up to 60° against perpendicular. It shall have no harmful effect (spray water).
4	Protection against water splashed against the fixture from any direction, shall have no harmful effect (splash water).
5	Protection against water projected by a nozzle against the fixture from any direction, shall have no harmful effect (hosed water).
6	Protection against green water or strong jet stream, water must not enter the fixture in harmful quantities (overflowing).
7	Protection against water when fixture is submerged under defined conditions of time pressure. Water shall not enter fixture in harmful quantities (submerging).
8	The equipment is suitable for continous submersion in water under conditions specified by the manufacturer.

Technical information

Light sources

Light sources

Halogen lamps

Traditional incandescent lamps lose part of their light intensity in the course of time since tungsten evaporates from the filament and condenses on the inside surface of the bulb forming a dark layer. In modern halogen lamps they prevent this effect by adding halogenes to the filling gas. Within the so-called halogen cycle the halogenes combine with the evaporated tungsten. This gaseous combination drifting with the heat flow towards the hot filament the tungsten will leave the combination and re-join the filament. The released halogenes are again available for the cycle.

Further advantages of halogen lamps:

- equally bright light throughout life time
- nice, brilliant light for fresh colours and attractive glamour effects
- increased light output about 25 % compared with traditional incandescent lamps
- small dimensions

Halogen high voltage lamps

Are available as standard with bases E27, E40 and R7s. They don't need a transformer.

High pressure sodium lamps (HS)

These lamps offer much light output because of their high efficiency despite of their small dimensions. They are not very sensitive

to vibration and have proved as outdoor floodlights on board of ships. You need a ballast and an ignitor. The average lifetime is about 6000 hours.

High pressure sodium lamps with instant ignition (HS)

have bases at both ends and need a special ignitor. In hot condition the lamp requires about 10 seconds to ignite.

Metal halide lamps (HI)

are similar to high pressure mercury vapour lamps concerning design and operation. Light output and colour response have been improved by adding some halogen combinations. Depending on the type they may operate with or without ignitor. There is a special version with one base at each end of the bulb enabling instant igniting in hot condition by means of a high voltage puls.

High pressure mercury lamps (HM)

These lamps don't need an ignitor but a ballast. There are types with E27 and with E40 base. The high pressure lamps contain a quartz burner as discharge tube. This tube is positioned inside a glass bulb on the inner surface of which there is a fluorescent layer. Having been switched on the burner slowly gets hot thus making more and more mercury evaporate. The more mercury evaporated the brighter the

light output. All mercury evaporated means the lamp features its rated luminous flux.

The average lifetime of this lamp is about 6000 hours. Its disadvantage is that it reacts to shortest interruptions of power supply and to severe voltage fluctuations by extinguishing and then needing several minutes to re-ignite.

Traditional incandescent lamps

In general there are no problems with incandescent lamps in lighting systems. They are economical to install since they require just a lampholder and two terminals. Their operating position is not critical. They are almost independent on ambient temperature and can easily be dimmed by phase control or phase reverse control.

Luminaires for incandescent lamps may as a standard be operated on 115 V or 230 V by simply changing the lamps. The average lifetime is 1000 hours and thus not very high. Incandescent lamps for navigation lights are a special case. They were developed precisely for application within an optical system and thus differ in many aspects from standard lamps:

- They have a special lampbase to make sure only these especially approved lamps are used in navigation and signalling lights. Moreover the particular base ensures the lighting filament being always in the correct position in relationship to lens and screening.
- Their maximum light efficiency / minimum power consumption ratio is set to its best.

- Their lighting filament is suspended in a very special way to prevent screening the filament in signalling lights.
- Their production process is particularly sophisticated for smallest tolerances with the filament and its suspension.
- They are approved by the responsible authorities of almost all important countries in the world.

Fluorescent lamps

Their advantage is their excellent economy. Their light efficiency per watt of invested power (lumen per watt) is very high. The elongated shape results in a low luminous density on their surface and thus in little glare. Lifetime is about 8000 hours if operated with conventional ballast respectively about 12.000 with electronic ballast. Fluorescent lamps may be dimmed down to 1 % of their rated luminous flux without any problems if operated by dimmable electronic ballasts.

Sealed beam

Sealed Beam Lamps are designed for those applications requiring specific bulb size, base, and voltage. These lamps are operated in special applications utilizing low voltage sources. Most lamps are designated by common ANSI (American National Standards Institute). Available in 12V/50W and 24V/100W.

Xenon

Xenon lamps are DC-operated lamps that are especially suited for applications requiring excellent arc stability and a high luminance.

Xenon lamps are short arc lamps in which the discharge arc fires in a pure xenon atmosphere under high pressure. Xenon lamps have a very good color rendering and extremely high luminance. For this reason they are often used in light guide systems, e.g. for endoscopy or dental technology.

The Xenon lamps are designed for horizontal burning position, and excel with their compact dimensions.

Ignitors

Metal halogen lamps and high pressure sodium lamps require a voltage of between 800 and 5000V to start working. There are two different igniting device systems. One is based on additional voltage load and the other one on pulsation technique. aqua signal has decided in favour of the modern extra voltage load system. Its big advantage is that the ignitor produces the ignition voltage without loading it on the ballast. This is of particular importance towards the end of the lamp's lifetime when the ignitor tries again and again to restart the exhausted lamp. Moreover the extra voltage load technique offers reproducible ignition properties independent on the ballast.

aqua signal's ignitors for high pressure discharge lamps have currently been improved to adapt them to the extremely rough operating conditions our floodlights have to meet with. They may be called unique since they not only ignite the lamps tenderly but also supervise ignition process and operation and recognize lamp failures due to ageing in which case they carefully switch the lamp off.

Cable entries

Cable entries

1

M 20 x 1.5 plastic, polyamide

for use on luminaires up to protection degree IP 67. Possible cable diameters 7 mm to 14 mm. Other diameter requirements should be stated when ordering.

2

M 20 x 1.5 brass, nickel plated

for use on luminaires up to protection degree IP 67. Possible cable diameters 8 mm to 13 mm. Other diameter requirements should be stated when ordering.

3

M 24 x 1.5 without earthing inserts, similar to DIN 89280 for cable MGG

(without protective cover). Possible cable diameters 8 mm to 17 mm. Standard sealing ring for cable diameter of 10 mm to 12 mm. Other diameter requirements should be stated when ordering.

4

M 24 x 1.5 with earthing inserts, similar to DIN 89280 for cable MGCG

(with protective cover). Possible cable diameters 8 mm to 17 mm. Standard sealing ring and earthing insert for cable diameter of 10 mm to 12 mm. Other diameter requirements should be stated when ordering.

Technical information

IEC 60945 International Standard

Requirements for radio equipment hereunder
remote controllers.

Radio equipment and remote controllers.

This International Standard assists in meeting a requirement of the International Convention for Safety of Life at Sea (SOLAS), adopted by the International Maritime Organization (IMO), that the radio equipment, and the navigation equipment be type-approved by administrations to conform with performance standards not inferior to those adopted by the IMO.

This standard specifies minimum performance requirements, methods of testing and required test results for general requirements which can be applied to

those characteristics common to all equipment described hereunder:

- a)** Shipborne radio equipment forming part of the global maritime distress and safety system required by the International Convention for Safety of Life at Sea (SOLAS) as amended, and by the Torremolinos International Convention for the Safety of Fishing Vessels as amended
- b)** Shipborne navigational equipment required by the International Convention for Safety of Life at Sea (SOLAS) as amended, and by the Torremolinos International Convention for the Safety of

Fishing Vessels as amended, and to other navigational aids, where appropriate.

- c)** For EMC only, all other bridge-mounted equipment, equipment in close proximity to receiving antennas, and equipment capable of interfering with safe navigation of the ship and with radio communications (see IMO Resolution A.813).

Note:

For EMC, this standard is in the IEC category "product family". The requirements of this standard are not intended to prevent the use of new techniques in equipment and systems, provided the facilities offered are not inferior to those stated.

Technical information

Ex norms and regulations

Introduction to the principles of explosion protected electrical equipment.
IEC 60079-0 to IEC 60079-18

Hazardous Area

For hazardous areas, it is very important that the product is designed for use in the actual area, and that operation and maintenance are according to the requirements.

The norms for hazardous areas are not the same for all over the world, but for Europe, they have been harmonized.

The ATEX directives for equipment (94/9/EC) and worker protection (1999/92/EC) in potentially explosive atmospheres become mandatory from 1st July 2003.

This means that all products delivered for installation in hazardous area in buildings and fixed installations in Europe from that date have to be certified according to the ATEX norms, while for the worker protection in existing enterprises, there is a 3-year transitional period to be updated.

The ATEX directives are covering both electrical and non-electrical equipment, and for the first time, mechanical equipment falls under this type of legislation.

Classification of Zones

The hazardous areas have to be classified in Zones:

ZONE 0 is a place where an explosive atmosphere consisting of a mixture of air with any combination of flammable gas, vapour or mist is present continuously, frequently or for long periods.

ZONE 1 is a place where an explosive atmosphere consisting of a mixture of air

with any combination of flammable gas, vapour or mist is present only occasionally during normal operation.

ZONE 2 is a place where an explosive atmosphere consisting of a mixture of air with any combination of flammable gas, vapour or mist is not likely to occur in normal operation, but if it occurs, will persist for a short period of time.

For explosive atmospheres due to combustible dust in air, a similaire classification exists, with the zones numbered Zone 20, Zone 21 and Zone 22.

Category groups

Electrical equipment has to be classified in two different category groups:

Group I	Electrical equipment for mining
Group II	Electrical equipment for all remaining hazardous areas

Equipment group

For the different areas, the equipment has to be classified

Group II. For gas and dust:

Zone 0/20	Equipment 1G/1D
Zone 1/21	Equipment 2G/2D
Zone 2/22	Equipment 3G/3D

Group I. For mining:

Methan	M1
Dust	M2 or M1

European Standard

European coding marking standard for products designed for use in hazardous areas:

Ex is the coding for products confirming to IEC standard

EEEx European CENELEC Standard

 If the product confirms to the harmonised European Standards which has been notified by EU for the ATEX directive, the product will also carry the hexagon Exsymbol.

ZONE Marking

Directive 1999/92/EC do also have requirement that areas in which explosive atmospheres can occur must have warning signs.

Technical information

Marking of explosion protected electrical apparatus

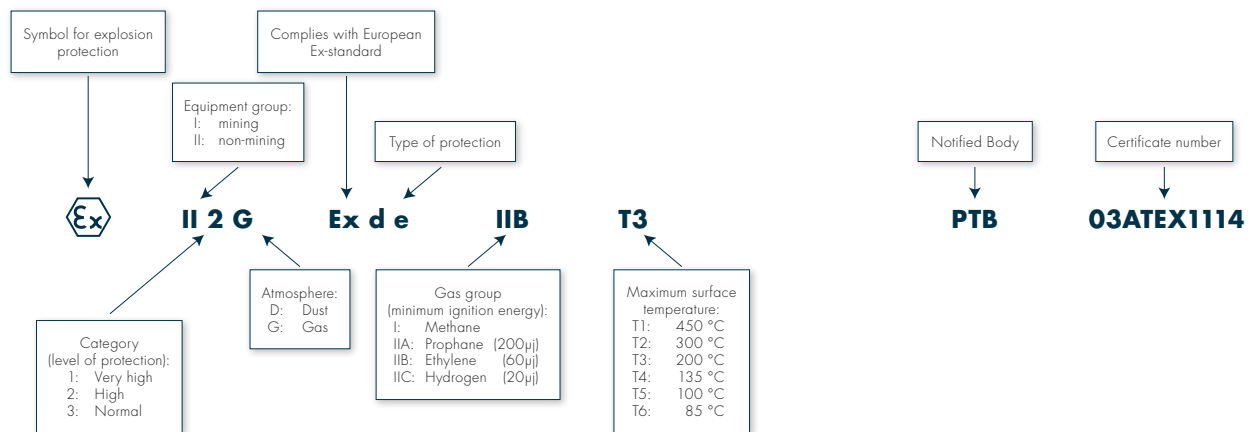

Product and area marking according to
directive 94/9/EC (ATEX)

ATEX labelling

Products certified according to ATEX also have the certification number as well as the certification authority and year of certification on the label.

For GFX floodlight you will find: PTB 03ATEX1114

This states that the fixture is approved by PTB (notified body number 0102) in year 2003, according to ATEX and the number given is 1114.

Temperature classes

For safety utilisation, the maximum temperature of the product has to be lower than the ignition temperature of the

inflammable gas or dust mixture. Based upon this, the products have to be classified into temperature classes.

Classification of maximum surface temperatures for Group II electrical apparatus

Temperature class	Max. surface temperature	Ignition temperature of combustible material
T1	450°C	> 450°C
T2	300°C	> 300°C
T3	200°C	> 200°C
T4	135°C	> 135°C
T5	100°C	> 100°C
T6	85°C	> 85°C

Technical information

Safety characteristics of flammable gas and vapours

Depending on the minimum ignition energy of the gas, the gases are classified in gas groups.

GROUP I Methane (mining)

GROUP IIA Gases with minimum ignition energy more than 80µJ. e.g. Propane

GROUP IIB Gases with minimum ignition energy from 45 to 80µJ. e.g. Ethylene

GROUP IIC Gases with minimum ignition energy less than 45µJ. e.g. Hydrogene

Technical information

Protection in hazardous areas

The basis principle of explosion protection is the same worldwide. It is the prevention of flammable materials (gas, vapour, mist or dust) in dangerous quantities air (oxygen) and sources of ignition, occurring at the same time. Areas, where the occurrence of explosive mixtures of flammable materials and air cannot be prevented by applying primary

explosion protection, special measures for the prevention of ignition sources are to be taken. Special construction and installation inquirements therefore apply to all electrical apparatus in hazardous locations.

According to EN 50014 and IEC 60079-0 the construction of explosion protected apparatus can be designed in

various types of protection. The following table shows the types of protection.

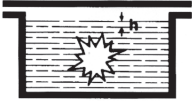

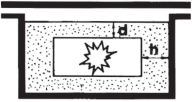

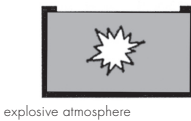

Type of protection to IEC Standard		Basic principle	Schematic	Applications
Flameproof enclosure EN 50018 / IEC60079-1	d	A type of protection in which the parts, which can ignite an explosive atmosphere are placed in an enclosure, which can withstand the pressure developed during an internal explosion of an explosive mixture and which prevents the transmission of the explosion to the explosive atmospheres surrounding the enclosure.		Switchgear, control and indicating equipment, control boards, motors, transformers, light fittings and other spark-producing parts
Increased safety EN 50019 / IEC60079-7	e	A type of protection in which measures are applied so as to prevent with a higher degree of security the possibility of excessive temperatures and of the occurrence of arcs or sparks in the interior and on the external parts of electrical apparatus, which does not produce therm in normal service.		Terminal and connection boxes, control boxes housing Ex-modules (of a different type of protection) squirrel cage motors, light fittings
Pressurized apparatus EN 50016 / IEC60079-2	p	A type of protection in which the entry of a surrounding atmosphere into the enclosure of the electrical apparatus is pre-vented by maintaining inside the said enclosure a protective gas (air, inert or other suitable gas) at a higher pressure than that of the surrounding atmosphere. The overpressure is maintained either with or without continuous flow of the protective gas.		As above, but especially for large equipment and complete rooms
Intrinsic safety EN 50020 / IEC60079-11	i	A type of protection in which the electrical apparatus contains intrinsically safe circuits, which are incapable of causing an explosion in the surrounding atmosphere. A circuit or part of a circuit is intrinsically safe, when no spark or any thermal effect in this circuit, produced in the test conditions prescribed in the standard (which include normal operation and specific fault conditions) is capable of causing ignition.		Measurement and control equipment

continues on next page

Technical information

Protection in hazardous areas

continued from previous page

Type of protection to IEC or European Standard		Basic principle	Schematic	Applications
Oil immersion EN 50015 / IEC60079-6	o	A type of protection in which the electrical apparatus or parts of the electrical apparatus are immersed in oil in such a way that an explosive atmosphere, which maybe above the oil or outside the enclosure cannot be ignited.		Transformers (only used rarely now)
Powderfilling EN 50017 / IEC60079-5	q	A type of protection in which the enclosure of electrical apparatus is filled with a material in a finely granulated state so that, in the intended conditions of service, any arc occurring within the enclosure of an electrical apparatus will not ignite the surrounding atmosphere. No ignition shall be caused either by flame or by excessive temperature of the surfaces of the enclosure.		Transformers, capacitors, heater strip connection boxes electronic assemblies
Moulding EN 50028 / IEC60079-18	m	A type of protection in which the parts which can ignite an explosive atmosphere are enclosed in a resin sufficiently resistant to environmental influences in such a way that the explosive atmosphere cannot be ignited by either sparking or heating, which may occur within the encapsulation.		Only small capacity switchgear, control gear, indicating equipment, sensors
Non sparking EN 50021 / IEC60079-15	n	Electrical apparatus is not capable of igniting a potentially explosive atmosphere (under normal operation and under defined abnormal operating conditions).	n: Zone 2 This type of protection includes several methods of ignition protection.	All electrical apparatus for Zone 2, less suitable for switchgear and control gear.

OptiWin®

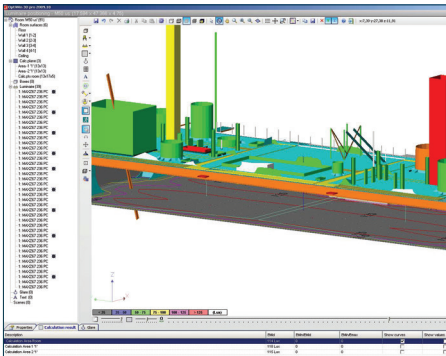

Light calculation software

- Allows for importing both 2D and 3D drawings from AutoCAD
- Unique tool for advanced engineering
- Projecting and documentation of complex lighting installations

- OptiWin® 3D Pro makes it possible to calculate the most demanding environments
- Save up to 80% engineering time. The light calculation enables you to take corrective actions at a very early stage

- The results will also secure the installation as you are taking into consideration all equipment from the drawing level
- All results are available in a comprehensive report

- You can exchange the result-database with other users through E-mail, reducing communication time
- The product database can be updated online to keep your result up to date

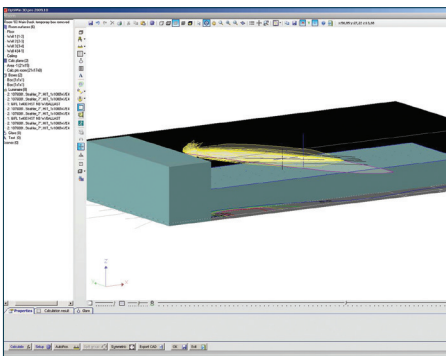

Big Models

With the 3D editor you can open the AutoCAD drawing and select the area to import into OptiWin® 3D Pro

Large Surfaces

Place the luminaries, perform the calculation. The result can be incorporated into the AutoCAD drawing

Time Saving

New tool showing the light distribution of a fitting. Excellent feature for location and orientation of floodlights

Real Life Illustration

The product database can be updated online, ensuring your results are up to date
